

YOUR HEALTH COMES FIRST

IMAGING

This area supports our physicians in the diagnosis of our patients, by being able to study structures inside the body, with the help of radiologic technology.

We have a specialized team prepared for the procedure of simple and special studies that the doctor requires for the correct diagnosis or as a supervision of a current treatment on the patient.

Our equipment:

- Magnetic Resonance Imaging (MRI)
- Densitometry
- Computed Axial Tomography
- Fluoroscopy
- Ultrasounds
- Tomosynthesis mammography
- Digital X Rays

What are the benefits of these studies?

- ✓ Detection of fractured bones
- ✓ Detection of injuries
- ✓ Arthritis signs
- ✓ Abnormal bone growths
- ✓ Detection of tumors
- ✓ Pathology diagnosis
- ✓ Anomalies in the blood vessels
